Abstract (en)

[origin: CA2800544A1] The invention relates to a container for receiving contents, in particular liquid foods, having a tubular main body and having at least one molded fiber part (2) connected to the main body (1), and to a method for producing such a container. For the container to be suitable for being aseptically filled with liquid or paste-like foods, according to the invention, the inner face of the at least one molded fiber part (2) is coated to be gas and liquid tight. According to the invention, the container is produced as follows: pressing at least one molded fiber part (2) from pulp, coating the inner face(s) of the molded fiber part or parts, providing the tubular main body, connecting the main body (1) to the (first) molded fiber part for generating a container that is open on one side, filling the container through the open side, and closing the container by folding or by joining to the (further) molded fiber part.
