Abstract (en)
[origin: WO2011128758A1] The invention relates to a load support device, made of cardboard material made up of at least one block element (1), characterised in that the shape of said block is substantially square, rectangular or the like, in other words, has a square, rectangular, octagonal, polygonal, triangular or equivalent cross-section, and has at least two vertical walls, preferably four (2, 3, 4, 5), a horizontal base (6), and an upper surface for receiving said load. Said block includes at least one locking fold (11) in one of the corners thereof, created by at least two lateral vertical contact sections (in the non-limiting event of a cube having a square or rectangular cross-section) which double the thickness of the material used at the points where the weight of the load will be distributed.
