Abstract (en)
[origin: WO2011128673A1] Improved dispensing containers (10) of the invention comprising a container part (20) having a cavity adapted for containing a plurality of preimpregnated treatment wipes, preferably wherein the said wipes are a roll of treatment wipe articles which can be separated by a consumer prior to use, a cap (30) through which one or more of the treatment wipes can be dispensed by being withdrawn from the cavity where the cap or part thereof is optionally but preferably resealable, and further wherein the dispensing container comprises at least one handle means (50). The handle means preferably depends from a part of the container, such as the container part, the cap, or both or alternately can be integrally formed as part of the container part, the cap, or both. The handle means may operate to provide an element which can facilitate the grip of the dispensing container and/or retention of the dispensing container by the hand or hands of a consumer holding, or otherwise retaining the container in the close proximity of a consumer utilizing the dispensing container during a surface treatment operation. The handle means may also operate to retain a connecting means.
