Abstract (en)

[origin: WO2011147480A2] A method of establishing an offshore foundation, in particular an offshore foundation for a wind turbine installation, on the seabed (3), in which at least one pile (2) is driven into the seabed (3) in order to establish an anchor for a foundation structure is provided. In the method, the foundation structure comprises at least one tubular hollow foundation member (1) with a longitudinal axis and an open longitudinal end (11) which is placed on the seabed (3) such that the open longitudinal end (11) shows towards the seabed (3). The pile (2) is located in the tubular hollow foundation member (1) when it is placed on the seabed (3) and is driven out of the tubular hollow foundation member (1) along the longitudinal axis and rammed into the seabed (3) to establish an anchor for the foundation structure after placing the hollow foundation member (1) on the seabed.
