Abstract (en)
[origin: WO2012089489A1] The hinge, in particular for articles of furniture, comprises a first part (5) of hinge which is associable to a body of a fixed article of furniture and a second part (4) of hinge which is associable to an element of the mobile article of furniture and is rotatably connected to the first part (5) of hinge between an opening position and a closing position of the mobile element, and retaining means (14,15) which at the closing position assume a variable configuration between a first configuration in which they retain the second part (4) of the hinge and a second configuration in which they release the retaining of second part (4) of the hinge in order to enable the second part of the hinge to reach an open position thereof.
