Abstract (en)

[origin: WO2011128542A1] [0043] The method according to the invention is a method for controlling the purging of a selective catalytic reduction system (1) for a vehicle. The selective catalytic reduction system (1) has a pump (4) for reducing agent (3), at least one supply line (5) supplying reducing agent (3) to an exhaust line (10) of the vehicle, and a purge fluid suction device. The method is characterized in that it involves determining a purge duration as a function of a state of fill of the supply line (5) prior to activation of the purge phase, and in that the method further comprises the updating of the purge duration during purging.
