Abstract (en)
[origin: WO2011141094A1] The invention discloses a valve arrangement having at least two valves (217, 219) and having a housing which is designed as an installation cartridge (201). The valve arrangement may have for example two valves, one of which is a pressure regulator and the other of which is a delivery flow regulator. A valve arrangement of said type may for example be inserted or screwed into a variable-displacement pump, as a result of which the spatial requirement of the valve arrangement can be minimized.
