Abstract (en)

[origin: WO2011130649A1] Provided is a laser dazing and aerosol spray weapon, including a handle encasement and a barrel encasement joined towards the barrel's rear end. The handle encasement has a major axis aligned approximately perpendicular to the barrel encasement. The barrel handle encasement includes a laser aperture (215), a control panel, an aerosol spray canister (160), a canister lever (180), a laser generator (210), at least one battery (230) for electrical power, and a plurality of control circuits (220) in communication with the laser generator (210), battery (230), indicators and switches. The weapon includes a trigger (140) with multiple detent positions and a laser range adjustment lever (120). The trigger (140), at a first detent position turns on the LEDs (295) for illumination, and at a second detent causes the laser generator (210) to generate dazing laser output. The aerosol spray is activated by a lever (180) on the weapon. The video turns on when the Dazer Laser is activated, and can be manually turned off.
