Abstract (en)  
[origin: WO201128331A2] The invention relates to a solar installation (1; 18 to 24; 31; 36; 37; 38; 45 to 49) for outputting electrical energy from at least one solar module (2, 3, 4; 25, 26; 32, 33, 34; 39), in which light energy is converted into electrical energy, wherein the electrical energy generated can be output from connection contacts (A1, A2) of the solar module (2, 3, 4; 25, 26; 32, 33, 34; 39), and wherein an artificial light source (L; 11; 30; 40, 41, 42) is provided, which is formed by an electrical light source (L; 30; 40, 41, 42), more particularly by a fluorescent tube (L; 40, 41, 42), and wherein the at least one solar module (2, 3, 4; 26; 32, 33, 34; 39) is embodied in a plate-shaped fashion and is arranged in a manner at least partly surrounding the artificial light source (L; 11; 30; 40, 41, 42) and wherein each of the solar modules (2, 3, 4; 26; 32, 33, 34; 39) is fixed on a module mount (5, 6, 7) wherein at least one module mount (6) of the solar installation has an articulation (8; 29; 35) for opening the solar installation (1; 18 to 24; 31; 36; 37; 38; 45 to 49) in order to be able to carry out service work on the solar module or the light source.
