Abstract (en)

[origin: CA2796074A1] The invention relates to a device (11) for electrically connecting a cable, in particular a plug-in connector part (2), having a housing (48) in which a connecting element (78) that can be mechanically fixedly connected to an inner conductor (53) of the cable is arranged, wherein the device (11) further comprises at least one fixing element (81, 85, 87), by means of which the connecting element (78), and hence the inner conductor (53) of the cable, is immovably fixed in the housing (48) by positive engagement when a tensile force occurs.
