Abstract (en)  
[origin: WO2011128307A1] The invention relates to a distribution terminal, in particular a main conductor connecting terminal (10), comprising at least one terminal body (18) that is disposed in a housing (12) and has two front faces (20, 22; 56, 48) and two side faces (24, 26; 60, 62), and further comprising at least one pair of conductor insertion openings (28) disposed at offset heights in the front faces (20, 22) and two bores (52) that adjoin the conductor insertion openings (28) and are disposed at offset heights in the or each terminal body (18), characterised in that each bore (52) in the terminal body (18) is formed on the front faces (56, 58) of said body in a bore surface portion (64, 66), and the bore surface portions (64, 66) of both bores (52) overlap in some parts.
