Abstract (en)

The present invention relates to a tool for the treatment of floors and surfaces in general. The tool comprises a strip (2) that can be dragged, during use, along a surface to be treated. At least one first surface portion (3) of the strip (2) is made of water-repellent material, so as to ensure the sweeping and consequent removal of dust, dirt particles and residues in general from the surface to be treated, following an entrainment action of the strip (2) thereon. At least one second surface portion (4) of the strip (2) is made of hydrophilic material, for its impregnation with a liquid in advance, and the consequent washing and/or disinfection and/or sanitization of the surface to be treated, following the same entrainment action of the strip (2) thereon.
