Abstract (en)

[origin: EP2559628A1] The container (2) has coupling elements (4) that are arranged on opposite side walls (7,7a,7b). Each coupling element is provided with a mounting portion (15) with which tank (5) is moved downward, such that tank is fixed to latch portion (16) along a release direction. The coupling element is provided with mounting portion by a plug connector, such that tank is secured at mounting portion to prevent the pivoting of latch portion along the release direction. The latch portion mounted on mounting portion is pivoted along the release direction by plug connector. An independent claim is included for container assembly.
