Abstract (en)
[origin: EP2559834A2] The device (7) has locking tab (1) which is inserted into first opening (A) formed at door frame. A latch (11) of the pressing device (2) is introduced into second opening (B) on frame, such that door leaf is pressed by movement of bolt of pressing device along inclined edge against frame. A trigger (4) is movable during insertion of locking tongue into first opening relative to locking tongue, and is in cooperation with locking tongue, for transfer of pressing device from locked state into unlocked state, so that bolt is inserted in second opening.
