Abstract (en)

[origin: CA2796713A1] The invention relates to a method for treating water by weighted flocculation including a step of injection into said water of at least one flocculation agent, a step of injection into said water of at least one particulate material which is denser than water, and a step of recovery of a treated water, characterized in that said weighted flocculation is used under stirring using a mean speed gradient between 100 and 1400 s⁻¹ and in that said flocculation agent consists of at least one carbohydrate polymer of natural origin having an anionic charge density between -900 and -4000 µEq/g.
