Abstract (en)
[origin: WO2012004304A2] The invention is directed to a pressurised filtration vessel (1), particularly in cylindrical form, comprising a filter element (2), comprised of a plurality of filtration membrane modules (3), particularly ultrafiltration membrane modules, a distributor (205) connected to an inlet (207) for distributing an input fluid to the filter element (2), and a collector (105) connected to an outlet (107) for collecting an output fluid from the filter element (2). The filter element (2) is located between the distributor (205) and the collector (105).
