Abstract (en)

[origin: WO2011132133A1] The aim of the invention is to provide a solution for guiding the cutting of a piece of plasterboard, which can be rapidly implemented, and does not require any finishing step for refilling the surface of the piece of plasterboard. To this end, the invention relates to a guide element (200) for guiding the cutting of a piece of plasterboard, said guiding element having two longitudinal edges and two ends, for guiding a cutting blade, during operation, parallel to the guiding element, said guiding element also comprising, at least on one end, a rotatably mounted abutment (210) provided with means (211) for holding the abutment against the piece of plasterboard.
