Abstract (en)

[origin: WO2011133038A2] Attachment for arranging a safety system. More particularly, an attachment to be disposed on a sloping roof at the location of or between tile battens and the like. The construction comprises an elongated profile and attachment bodies for fixing on the roof. The attachment bodies are movable in relation to the elongated profile so that they can be fixed to the roof in any given position. The construction is such that the attachment bodies grip at a low point on the profile. As a result, substantial forces can be absorbed. Supports which, depending on the intended use, may or may not extend through the roof covering and to which the safety system, such as a belt, can be fixed, can also be disposed in a movable manner on the profile.
