Abstract (en)
[origin: WO2011131298A1] A multiple-barrel weapon (1) is proposed, having a belt system (5) which can not only hold a conventional or other round (6) and may itself be a component of the round (6), but, together therewith, forms a cartridge chamber (22) for the multiple-barrel or multiple-tube weapon (1) as a result of which it is possible to dispense physically with a dedicated complete cartridge chamber. Stars (12, 13) of a roller breech are responsible for transporting the belt element system (5), wherein shells (12.1, 13.1) of the stars (12, 13) partially chamber the belt element (4) in the firing position.
