Abstract (en)  
[origin: WO2011131852A1] The invention relates to a computer system that is set up to access an extended network. Said computer system is characterized in that it includes: a memory (20) that stores sharing page data; a memory (22) that stores sharing page structure data; a memory (18) that stores editor profile data; an extractor (13) that is set up to receive an access request and to extract a sharing page identifier and an editor profile identifier therefrom; a screener (14) that is set up to extract sharing page data on the basis of a sharing page identifier; an engine (16) that is set up to generate a sharing page on the basis of sharing page structure data, sharing page data, and editor profile data; and a driver (10) that is set up to receive an access request for an extended network element, is intended for calling the screener (14) with the sharing page identifier and the editor profile identifier that are predetermined by the extractor (13), is intended for calling the engine (16) with the resulting data and the sharing page structure data, and is intended for sending the resulting page back to said extended network element.
