Abstract (en)
[origin: WO2011133095A1] The present invention relates to a method for comparing a fuel consumption of a first vehicle with a second vehicle, which first vehicle has a first energy converter in the form of a combustion engine to generate a first driving force for propulsion of said first vehicle, and at least a second energy converter in the form of a first electrical machine to generate a second driving force for propulsion of said vehicle. The method comprises, at a first point in time, where said first and second vehicles are driven in the same way: - using determination means to determine a difference in fuel consumption between said first vehicle and said second vehicle, said second vehicle having only one energy converter to generate driving force for its propulsion, in the form of a combustion engine which is substantially identical with said first combustion engine.
