Abstract (en)

[origin: WO2011131341A1] The invention relates to an inductive component, in particular a storage choke, which contains a core having variable characteristics, wherein in some aspects the magnetic permeability is laterally variable, whilst in other aspects the setting of the permeability takes place additionally or alternatively by means of different materials, the composition of which can be altered if required in a dynamic manner. The invention relates in particular to a storage choke, in which a separate centre limb is provided.
