Abstract (en)
[origin: WO2011131424A1] The invention relates to a filter unit for a switch cabinet, comprising a filter housing having an air passage that can be covered by an air passage grating at least to some extent. The aim of the invention is to allow such a filter unit to be maintained easily. For this purpose, the air passage grating is hinged indirectly or directly to the filter housing and can be adjusted between a closed position and an opened maintenance position. The filter housing has a retainer which positively blocks a catch of the air passage grating in the maintenance position.
