Abstract (en)
[origin: EP2561850A1] The apparatus has a base structure (1) comprising a connecting rod (3) arranged at a turntable (2). A motor drivable dildo is formed by a rocker panel attachment (5) and releasably mounted on a piston, and comprises a fluid-fillable primary chamber. The piston comprises a longitudinal axial borehole, which is fluidically connected with a fluid reservoir over a pump and extended into the primary chamber. The panel attachment is provided as a curved casing in a non-fluid filling condition. An erect link extends corresponding to a longitudinal axis of the piston in a fluid filling condition. An independent claim is also included for a software program or software program product having a set of instructions for executing a process involved in a sexual stimulation apparatus.
