Abstract (en)

[origin: EP2561910A1] The present invention consists of a puzzle of pieces that move vertically and horizontally on a board. Each piece has an image on its visible side which once put into its correct position allows the complete image to be seen. Each piece is divided into sub-pieces which are enclosed in a transparent casing where they are able to rotate independently. The base board consists of micro magnets in combination which provoke the rotation of the pieces, which also contain micro magnets.
