Abstract (en)  
[origin: EP2562114A2] An automatic winder (1) includes an AC-DC converter board (62), on which an electric circuit is formed by mounting electronic components, sensors (62a, 62c, and 62c) that detect a temperature, a voltage, and an electric current which are loads on the AC-DC converter board (62), and an information storing section (61a) that accumulates and stores therein the temperature values, voltage values, and electric current values detected at different points in time as load log information.
