Abstract (en)

[origin: EP2562120A1] The device (1) has a two-piece shaft profile (7) connecting a guide rail (2) with a building-side shaft wall (3) and fixed on the guide rail. A counter-profile (9) connects an angle profile with the shaft wall, and an insulator made of an elastomer material is formed between the angle profile and the counter-profile. The insulator includes two insulator layers (10) that are mutually spaced at distance from each other, and a metallic balance mass part (11) is arranged between the insulator layers. The balance mass part includes longitudinal-and transverse extensions.
