Abstract (en)

[origin: EP2562121A1] The device (1) has a fastening console fixed at a guide rail (2), and a counter profile (9) connected with a shaft wall (4). An insulator (8) is arranged between the fastening console and the counter-profile. Stoppers are provided as counter bearings for the insulator for limiting expansion motion at the fastening console, the counter-profile, the guide rail and/or the shaft wall. A space (12) is formed between the counter bearings and the insulator. A spring or a spring pack is provided at the shaft wall below a nut (5.2) for a fastening screw (5).
