Abstract (en)  
[origin: EP2562297A2] The device has a carding strip fastened to an intermediate carrier (7). The intermediate carrier is adjustably mounted on a main carrier (4). The main carrier is fastened to a machine frame, side signs (3) and arcs. Fastening elements (5) connect the intermediate carrier and the main carrier, and are arranged over working width of a carding cylinder (2) and the intermediate carrier. Two series of adjustment elements are extended in parallel over the working width. The intermediate carrier is tiltably adjusted at a longitudinal axis and made from aluminum or composite material.
