Abstract (en)

[origin: EP2562308A2] The method involves selectively deflecting bulk materials (2) from conveyor tracks (7) to a storage medium (15) e.g. storage conveyor belt (18), by a deflecting device (19) for intermediate storage of the bulk materials on the storage medium. The storage medium is provided with receiving and dropping ends (16, 17). The storage conveyor belt is arranged above and/or below the conveyor tracks. The bulk materials are returned again on the conveyor tracks for terminating the intermediate storage. The deflecting device is formed by a pivotable flap (20) and/or a chute (21). An independent claim is also included for a transport system.
