Abstract (en)  
[origin: EP2562338A2] The door handle assembly (1) comprises a lock cylinder (5), and a bearing bracket (3) for receiving the door handle components, which is coupled with a lock cylinder housing (4). The bearing bracket has a receptacle for accommodating the housing. The outer contour of housing is coordinated on the inner contour of receptacle so that at least one region of contact between the housing and receptacle forms a slide-gate which enables movement of housing during insertion into receptacle along a spatial direction which is oblique to other spatial direction.
