Abstract (en)  
[origin: EP2562498A2] A cooling device (S) of the invention comprises at least one door (K) which moves in depth direction (+X - -X), at least one door handle (M) which is provided on the door (K); at least one connection element (1) to which the door handle (M) is fixed via at least one fixing element (4), which is engaged to the door (K) by at least one pin (1a), which is able to move around this pin (1a) in radial direction (+R - -R); at least one door tongue (3) which is engaged to the door (K) in depth direction (+X - -X), which projects from a wall (K1) of the door (K) close to the cooling device (S) and which comprises at least one tongue protrusion (3a) which contacts with at least one rest protrusion (1 b) provided on the connection element (1) at the same side with the door handle (M) with respect to the rotation axis of the pin (1a).
