Abstract (en)  
[origin: EP2562882A2] The device (1) has a plug unit (3) with a plug contact (13) electrically contactable with a measuring device e.g. continuity tester and voltmeter. A socket unit (4) with a socket housing (16) is electrically contactable with the measuring device. Cross-section of an aperture (15) in the socket housing is formed corresponding to cross-section of the plug contact. The arrangement of the aperture in the socket housing enables access to a socket contact within the housing and/or a connection opening is formed in the housing. The socket unit has the socket contact corresponding to the plug contact. An independent claim is also included for a plug device set.
