Abstract (en)
[origin: EP2563040A2] The system has a remote control (3) comprising an upward-key (5), a downward-key (6) and a stop-key (7), where continuous motion process of an electric drive actuator (1) is interrupted by actuation of the stop-key. Dimming process of an electric illumination actuator (2) is triggered by actuation of the upward and downward keys of the remote control besides the motion process. Interruption of the dimming process of the illumination actuator is triggered by actuation of the stop-key of the remote control, where the system is brought into a synchronous-operating mode.
