Abstract (en)

[origin: WO2011116844A2] The present application relates to a multicomponent packaging unit (kit of parts) which contains at least two containers that are prepared separately from one another, wherein a first container (C1) contains a colour-change preparation (FäZ) and a second container (C2) contains an oxidizing agent preparation, and wherein the oxidizing agent preparation (OxZ) comprises at least two phases separate from one another, wherein (i) the first phase (I) is an aqueous phase which, in a carrier that is acceptable for cosmetics, contains at least one chemical oxidizing agent and at least one anionic polymeric thickening agent, selected from homo- or copolymers of acrylic acid and/or methacrylic acid, and (ii) the second phase (II) is a hydrophobic phase that contains at least one oil, selected from paraffin oil or liquid carboxylic esters of C2-C8 monoalkanol with a mono- or dicarboxylic acid. Colorants which were produced from the components of such a multicomponent packaging unit have good application viscosities and are distinguished here by a reduced content of anionic, polymeric thickener.
