Abstract (en)

[origin: WO2011135237A1] The invention relates to a facility for grinding inorganic material comprising: a means (1) for supplying raw material; a means (2) for detecting metal material coupled to a discharge circuit (3); a first static separator (4); a roller press (5); a dynamic separator (6); a ventilation circuit (7); and a circuit (8) for circulating the finished product. The press is connectable by means of a conveyance system (25) having a diverting circuit (26) or a second static separator (27), at least one of the outlets (28) of which is connected to the dynamic separator (6).
