Abstract (en)

[origin: WO2011135605A2] A reduced dimensions platform (1) for the landing of an aircraft on an access facility (B) comprising a support base (2), suitable to be fixed on a reference surface (P) belonging to said access facility (B), and a landing footboard (3), superiorly connected with said support base (2) and suitable to receive said aircraft. Specifically, the landing footboard (3) includes a central body (4), coupled with support base (2), and a plurality of peripheral panels (5), operatively connected with drive means (6) which move the peripheral panels (5) from/to a rest position, in which said peripheral panels (5) are contained within the dimensions of the central body (4), to/from an operating position, in which the peripheral panels (5) projects laterally from the central body (4) and are combined and side-by-side each other so as to be coplanar with each other and the central body (4) itself and make the landing footboard (3) ready to receive said aircraft.
