Abstract (en)
[origin: CA2802581A1] The invention relates to a side protection system for building sites having safety elements (10) fastened to a plurality of carriers. In this case, the carriers (54), which are each composed of a flexible material, are arranged under tensile stress between every two vertically extending wall or support elements (46), wherein safety elements (10) which are in the form of panels or lattices are connected releasably to at least two carriers (54) which are spaced apart vertically from each other.
