Abstract (en)

[origin: WO2011134666A1] The invention relates to a radiating element (30, 50), e.g., for a network antenna, having stacked Fabry-Pérot resonant cavities (31, 32) of a compact structure, a lower cavity (32) being supplied by energizing means (33), the radiating element (30, 50) being characterized in that corrugations are formed substantially beneath a first floorplan, which, at the lower portion thereof, defines the upper resonant cavity (31). The invention further relates to a radiating element structure (30, 50) of improved compactness, on the upper cavity (31) of which a polarizing radome (51) is mounted.
