Abstract (en)
[origin: WO2011134039A1] Establishing communication links during a failure within a mobile communications network. Detection of disruptions (270, 272, 274, 276, 278, 280, 282, 284, 286, 288) in communications between a plurality of base stations (218, 228, 238, 248) and a plurality of mobile terminals (220, 230, 240, 250, 260) activates survivability components (330, 518) within the base station (116, 126, 136, 146, 216, 226, 236) and the mobile terminal (105, 115, 125, 135, 145, 205, 215, 225, 235, 245) to operate in a survivability mode. The survivability mode enables communications and services (440, 442, 444, 450, 452, 640, 660, 670, 680, 690) to be provided by the surviving base stations (216, 226, 236) to mobile terminals (220, 230, 240, 250 260) through activated survivability components (205, 215, 225, 235, 245). The alternate communication links (124, 134, 144, 224, 234, 244. 420, 430) may operate for as long as a disruption exists.
