Abstract (en)
Perfected cable holder made of cardboard, or corrugated cardboard, comprising two flanges (11), and a support element (12) conformed as a drum and disposed between the two flanges (11), the support element (12) being obtained by bending at least a sheet of cardboard to define an internal surface (23) and an external surface (13) on which a cable (14) is suitable to be wound. The support element (12) is provided, in proximity to its ends, with protruding extensions (15) suitable to reciprocally connect the flanges (11) with the support element (12). Each of the flanges (11) comprises a first element (25) suitable to act as a containing wall of the cable (14) which is wound on the external surface (13) of the support element (12), and at least a second element (26) with a shape and size mating with those of the cross section of the internal surface (23) of the support element (12). The second element (26), in use, is disposed adjacent to the first element (25) and internally to the support element (12).
