Abstract (en)
To provide a flechage knitting method in which the number of times to carry out flechage can be increased compared to the flechage knitting method using tuck and in which a hole is less likely to form at a position of a flechage end. A flechage knitting including a forward knitting and a backward knitting, which knitting width is shorter than a base stitch row 1, is carried out following in a wale direction of the base stitch row 1 held on needle beds. In this case, split knitting is carried out at least one of when knitting a termination stitch 29 of the forward knitting and when knitting a starting end stitch 31 of the backward knitting, and a widening stitch 4 formed by the split knitting is overlapped with a returning point stitch 5, which is a stitch in a forming direction side of the forward knitting of the widening stitch 4.
