Abstract (en)
[origin: WO2011138543A1] The invention relates to an adapter (1) intended for positioning a teat (2) on a container (3) including a neck (4) provided with an outer thread (5), said container (3) preferably being a bottle or a nursing bottle, characterised in that said adapter (1) includes two portions, an upper element (6) and a central element (7) the upper surface of which is referred to as the platform (7a) and the lower portion (7b) of which includes at least one thread (8) suitable for engaging with said outer thread (5) of said container (3), said upper element (6) being suitable for being juxtaposed on the platform (7a) of the central element (7), the upper element (6) and the central element (7) engaging by at least one closing means (14) suitable for securing the upper element (6) on the central element (7) in a permanent or reversible manner, the space (9) between the upper element (6) and the platform (7a) of the central element (7) being designed to receive the apron of the teat, said upper element (6) and said central element (7) each having a central opening (10, 11), the two central openings (10, 11) being suitable for being juxtaposed, the opening (10) of the upper element being intended for receiving the teat (2), which can be slipped on from the inner surface (12) of the upper element (6). The invention also relates to a method for preparing a nursing bottle with one hand, using the adapter (1) according to the invention.
