Abstract (en)

[origin: WO2011138123A1] The invention relates to a frame arrangement (10) for a roll-over protection system (1) for a vehicle, in particular for a motor vehicle, with a profile element (16) which is mounted movably between a first position, preferably a retracted position, and a second position differing from the first position, preferably an extended safety position. According to the invention, a profile cross section of the profile element (16) is designed in such a manner that one or more devices of the roll-over protection system (1), in particular a locking device (328) for locking the profile element (16) and/or a force application device (330) for applying force to the profile element (16), can be partially or completely accommodated and/or fixed in the profile element (16). Furthermore, the invention relates to a roll-over protection system for a vehicle with the frame arrangement according to the invention.
