Abstract (en)

[origin: CA2795596A1] The invention relates to agents for treating Alzheimer's disease. According to the invention, a peptide according to sequence number 1 is provided, which binds to A β oligomers and thus leads to healing or abatement of Alzheimer's disease. In further embodiments of the invention, peptides are provided, which contain a sequence number 1 but have preceding sequence segments that enable the peptide to be secreted. For the purpose of gene therapy, corresponding DNA sequences and vectors, in particular according to sequences 3 to 6, are provided.
