Abstract (en)

[origin: WO2011138061A1] The invention relates to a method for securing data packets to be transmitted via an interface, comprising a step of determining a check number (322) over at least a portion of a first data packet (336) and at least one portion of a second data packet (324). For this purpose, the first data packet (336) is arranged according to a transfer protocol in a first data frame (311) and the second data packet (324) is arranged according to the transfer protocol in a second data frame (312).
