Abstract (en)

[origin: CA2751611A1] A cycling outer shell worn over a cycling jersey comprises a torso portion made of panels. Front and back surfaces of the torso portion cover the front and back of the wearer, respectively. A cutout in the lower portion of the back surface is in alignment with the jersey pockets, and has a peripheral edge with opposite lateral edge portions, and bottom and top edge portions. The width between the lateral edge portions of the cutout and the height between the bottom and top edge portions are generally equal to those of the jersey pockets. A see-through panel located in the lower portion of the back surface of the torso portion forms a window located opposite the jersey pockets. A slit defined in the lower portion of the back surface and located above the jersey pockets opens to the interior of the outer shell, providing access to the jersey pockets. The slit has a width generally equal to that of the jersey pockets.
