Abstract (en)  
A heated air blower includes: a housing (3) within which an air blower unit (9) that discharges from an air blower port (2b) air sucked from an air inlet port (2a), a heating unit (H) for heating the air blown by the air blower unit (9), a hot air flow passage (31) through which the heated air passes in an event of driving the heating unit (H), and a cold air flow passage (32) through which original air passes, are provided; a temperature sensing unit (40) for sensing an ambient temperature; and a control unit (35) for controlling the heating unit (H) in response to a detected temperature of the temperature sensing unit (40). The temperature sensing unit (40) is provided in the cold air flow passage (32) in the housing (3).
