Abstract (en)

[origin: EP2567738A2] The construction (10) has a rectangular shaped building-inner surface (12) comprising two end faces (14) and two longitudinal sides (16), where the longitudinal sides are arranged on a boundary unit (15) for a partial limitation of an indoor surface. One of longitudinal sides of the indoor surface is arranged such that a front opening of a gate device (22) comprises a vertical face flush. A ball safety barrier is attached at a frame (23), and neighboring vertical carrier elements (18l, 18s) are connected by a cross rib. An independent claim is also included for a goal device for receiving a sports equipment comprising a frame.
