Abstract (en)
[origin: EP2567789A2] The apparatus (50) has a body (52), and a head (54) comprising a reception housing (56) for receiving a fixing element. The head is slidably mounted according to sliding direction (L) with respect to the body between storage and installation positions of the element. The housing is delimited by a bottom (72) to receive a complementary surface formed of bottom of the element and retaining surfaces formed of pneumatic cylinder (74) and a rod (76) to retain the element. The bottom and the retaining surfaces are fixed with each other during displacement of the head to the installation position.
